Re: MT-17 incorrect handling restriction

To Whom This Concerns:

It has come to our attention that the "Storage and Handling" section of the MT-17 product label contains a directional error. The current label contains the statement: "Do not mix with fertilizers containing phosphorous or thiosulfate fertilizers.". This statement was not intended to be included on this label and is not relevant to the product. There should be no adverse effects to the product, or its effectiveness once applied by mixing with phosphorus or thiosulfate materials.

The correct Storage and Handling statement should read as follows:

"MT-17 should be stored in clean containers that are vented. Do not mix with fertilizers until day of application. Jar test to assure compatibility with other products."

We will be updating the product label at the next available opportunity and correcting this error. Should you have any questions please reach out to your Douglas Plant Health representative.

Thank you,

Todd J. Fleischmann
